Orion Packaging offer new angles on low-cost stretch-wrapping solutions

Orion Packaging, the leading UK-based manufacturers of wrapping machine systems, have extended their capability by becoming UK distributors for Heikaus and the new generation of low-cost WINWRAP Stretch Machines.

This gives Orion customers yet more options to enjoy cost-effective pallet-wrapping with two machines specially designed to operate using WINWRAP pre-stretched film with all the cost-saving and other benefits this brings.

The Heikaus RD 202 is a portable pump-up machine with a rotary arm for the automated wrapping of loads of all shapes and sizes. A simple user display makes this battery-powered machine simplicity itself to operate, while its WINWRAP compatibility adds further savings to the machine's selling price.

Equally well-priced is the Heikaus WR 680 – a static machine with a 1.65m rotary table which can wrap up to 11 pallets per hour. Its battery-operated wrapping unit has been developed to wrap pallets up to 2.4m in height, again using the successful WINWRAP concept.

Because WINWRAP stretch film has had all the elasticity taken out of it, up to 50 per cent less film is required for a typical pallet-wrapping exercise, with all the cost-savings this implies. Loads tend to be more stable because of the increased taughtness of the high quality resin wrap, whilst the lightweight rolls have a special patented protection to their edges and therefore provide a higher quality finish to the job.

WINWRAP is tough enough for the most demanding job and yet it can be used for food processing and other sensitive applications. In addition, the material savings are good news for disposal costs and the environment as a whole.
